

Barracuda Cloud Archiving Service

Cloud-based Archiving for Compliance and eDiscovery

Barracuda Cloud Archiving Service provides cloud-based archiving, enabling organizations to meet demanding compliance requirements and address eDiscovery requests easily and effectively. Ideal for Office 365, this approach ensures email is stored securely in a separate repository for as long as needed without risk of deletion.

The Barracuda Advantage

- No hardware or software required
- Simple per user pricing
- Mobile applications for anytime/anywhere access
- Outlook Add-in for combined mailbox and archive search
- Automated discovery and import of PSTs
- Single solution for email and instant message archiving

Product Spotlight

- All-in-one, cloud-based archiving service
- Mobile app provides user access, including offline access
- Granular retention, search, and legal hold
- Preserves email in secure, immutable storage
- Role-based search to simplify eDiscovery

Cloud-based Archiving

Requiring no hardware or software, the Barracuda Cloud Archiving Service integrates with Office 365 to create a cloud-based indexed archive. This allows granular retention policies, extensive search, auditing/permissions, legal hold and export, helping to facilitate compliance retention and eDiscovery preservation. Legal holds preserve email from being tampered with until it's removed. Native and mobile apps provide intuitive interfaces that ensure messages are found easily.

Demonstrate Compliance

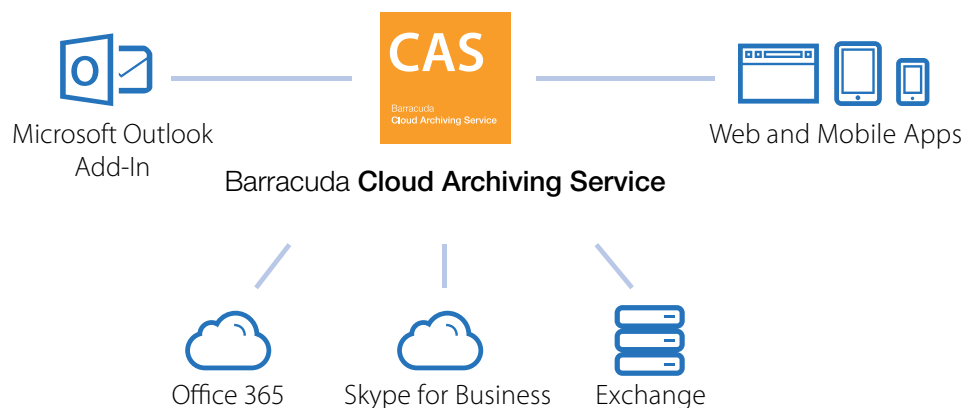

The Barracuda Cloud Archiving Service minimizes risk of deletion by storing email outside the production email environment in a dedicated, secure archive. This ensures that original email data is kept for as long as needed. Compliance is easy to demonstrate, and end users can have read-only access to search and retrieve email themselves at any time from any device. Role-based access and audit trails ensure only authorized personnel have access to the archives.

eDiscovery and Legal Hold

The Barracuda Cloud Archiving Service indexed archive supports extensive search, auditing/permissions, legal hold and export, helping facilitate eDiscovery and retention. An intuitive interface and powerful feature set shortens response time to ensure messages are found easily when needed. This approach means that there is no conflict between retention for operational compliance and legal hold for search and discovery exercises.

Users can search and retrieve archived messages anywhere, anytime.

Product Features

Archiving

- Archive directly from Office 365 to cloud-based archive
- Email messages, calendars, tasks, contacts, and public folders
- Skype for Business (Lync) conversations
- Integrates with Exchange and all Office 365 plans

User Access

- Full-featured, robust mobile apps (iOS, Android)
- Full-featured Outlook Add-in
- Web interface
- Quickly restore messages with Resend to Me
- Offline access

Efficiency

- No hardware required
- No software required
- No cost for data import or export
- Unlimited archive storage

Integration

- Exchange/Exchange Online journaling
- Import from Exchange/Exchange Online
- Import from Skype for Business (Lync)
- Export via PST or EML
- Export to CudaDrive

Management

- Predefined roles
- Granular control for access and policy
- Domain-level auditor
- Retention policies
- Legal hold

Message Search

- Full text search with multiple operators
- Metadata, contents, attachments
- Reusable saved search
- Tagging
- Reply to, forward and export messages

Secure Cloud Data Centers

- AES 256-bit encryption at rest and in transit
- Public key cryptology (RSA 1024)
- Isolated customer metadata database
- Redundant storage
- Geographically distributed data centers
- Tier 3 & 4 data centers

Web-based Management

- Managed via Barracuda Cloud Control
- Convenient configuration and management
- LDAP and multi-factor authentication
- Mixed-mode for managing existing Barracuda products
